

Replace

- With `std::regex_replace`, you can replace a character pattern in a text.
- `std::regex_replace`
 - returns the modified text.
 - can handle ranges.

- **Examples :**

```
std::string str(std::regex_replace(text, regex, replString));
```

```
std::string str2;
```

```
std::regex_replace(std::back_inserter(str2),  
                  text.begin(), text.end(),  
                  regex, replString);
```
