

Search

- With `std::regex_search` you can search a character pattern is in a text.
- `std::regex_search`
 - Has an overloaded version without match object. This version returns a boolean.

```
std::string text="C++ or c++";  
std::string regExpr(R"(C\+\+)\");  
std::regex rgx(regExpr);  
  
if (std::regex_search(text, rgx)){ . . . }
```
